Introduction

What does it do?

This extension shows a list of pictures (in this case portraits) depending on the selected group with the standard or an alternative image and a link.

Screenshots

Below are an example of the Frontend view.

Users manual

Install the extension

The first step you need to do is to install the extension with the extension manager. You can get it by going to Tools section and choosing "Ext Manager" on the main action menu . Then select "Import extensions" in the dropdown Menu at top. Type "**dg_headslist**" in the search field and click on the "Look up" button. You should find the heads list extension. If you have never installed this, then you will see a red arrow to the left of the extension and you can click on that to install. If it has been installed, you can click on the green arrow to load the newest version if one exists.

Create the data folder

You can now create a new SysFolder. It´s possible to create the extension records in normal pages but we recommend to use a new SysFolder because there can be many records and you can keep everything in one place. To create a new SysFolder add a new page to the page tree and change the type to Sysfolder.

Add groups and data records in the data folder

Groups and data records are only visible in the list view, so switch to the List view please. Click on "Create new record" and choose one of the following:

You have to add your groups first, because you need the groups to add them to a new data record. The form fields are self-explanatory. At the bottom you see the fields for the data record, groups only contain a name field.

Add the extension to a page

Select a page from the page tree in that you want to use the extension. Click on "create new content element" and then at the bottom in the plugins section on "heads list". When you are done with this, you have to configure the options.

Configure the options

After you add the extension to a page, you have to edit the flexform options. We have two tabs, General adjustments and ToolTip.

General adjustments

Property:	Description:
What to display:	Select what to display. NORMAL (default): Displays the images with the groupmenu. GROUPMENU: Displays only the groupmenu.
Startingpoint:	Select the Sysfolder with the data records, if you leave it blank the startingpoint will be the current page.
max. Image width:	If you leave it blank the image will be shown in original width.
max. Image height:	If you leave it blank the image will be shown in original height.
Default group:	Select the group which will be displayed when you enter the page, if you leave it blank all data records will be displayed with the active image.
Show grouplist:	This is selected by default, when you deselect it the grouplist will not be shown under the images.
Show inactive images:	This is selected by default, when you deselect it the inactive images will not be shown.
Links only on active images:	Just like it sounds.

Property:	Description:
Use language overlay also for data records:	Just like it sounds.
PageID to NORMAL: (for GROUPMENU)	The ID of a page were you use the NORMAL view, only used for the GROUPMENU view.
Put link parameter on data record links:	If you use this, you can mark the actual group on the data record detail page if there is a groupmenu on it.
Template:	You can add your own template, if you leave it blank the default template will be used. (EXT:dg-headslist/res/headslist_templ.html)

ToolTips
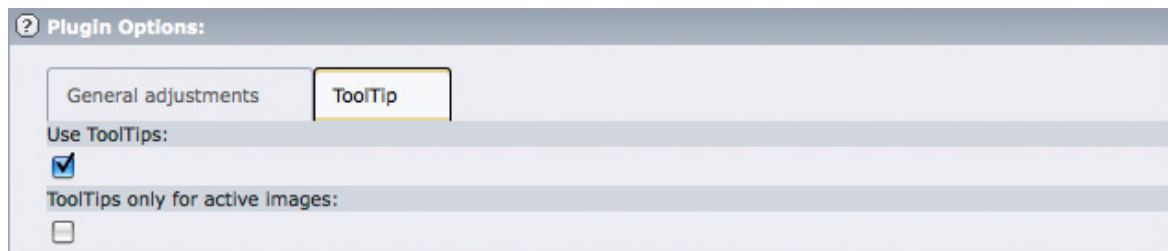

Property:	Description:
Use ToolTips:	This is selected by default, when you deselect it the tooltips are disabled.
ToolTips only for active images:	Just like it sounds.

currentWrap	string	Wrap for a current link in the group menu.	
activeWrap	string	Wrap for a active link in the group menu.	

[tsref: plugin.tx_dgheadslist_pi1]

Example

Insert a group menu in a marker, so that it is visible on all detail pages:

```
lib.headsmenu < plugin.tx_dgheadslist_pi1
lib.headsmenu
     code = GROUPMENU
     pidList = 10
     normalPid = 123
}

page.10.marks.HEADSMENU < lib.headsmenu
```

Template Marker

The template can be found at: EXT:dg_headslist/res/headslist_templ.html
